

## TECHNICAL DATA SHEET

## PHOSPHOR 20

## Liquid Phosphorus

Nutrients

## High-availability phosphorus for deep roots and maximum turf density

Liquid fertilizer with 20%  $P_2O_5$  of mineral origin (phosphate rock), enriched with freshwater unicellular algae (10%) to maximise bioavailability and absorption speed. Phosphorus is the key nutrient for root system development, ATP synthesis and turf recovery after mechanical or water stress.

## WHEN AND HOW TO USE IT?

Apply on football pitches and golf fairways to stimulate deep rooting and accelerate regeneration after mechanical maintenance such as aeration, verticutting or scarification. Particularly recommended during turf establishment, after seeding or in recovery following high-load playing seasons.

## KEY BENEFITS

- Stimulates root elongation and turf density
- Accelerates regeneration after aeration and verticutting
- Enhances ATP synthesis and energy metabolism
- Algae fraction optimises rapid and complete P absorption

## COMPOSITION

Phosphorus — phosphate rock (P $\blacksquare$ O $\blacksquare$ )	20%
Freshwater unicellular algae solution	10%

## APPLICATION

Mode	Foliar
Rate	3–5 l/ha in 300–500 l water
Interval	Every 2–4 weeks as required
Note	Shake well before mixing into tank

## SPECIFICATIONS

Form	Liquid
Colour	Light brown
pH	6.10 $\pm$ 1.00
