

TECHNICAL DATA SHEET

PK 20-20

Liquid Phosphorus-Potassium

Nutrients

Balanced 1:1 P+K combination for high-demand phases and stress recovery

Liquid phosphorus-potassium fertilizer in a 1:1 ratio (20% P₂O₅ + 20% K₂O), of mineral and plant origin, organically certified. Formulated to meet the nutritional needs of sports turf during phases of high energy demand and accumulated stress, where simultaneous availability of both macronutrients is critical for turf stability.

WHEN AND HOW TO USE IT?

Integrate into summer and autumn programmes to harden the turf against winter and maintain wear resistance during peak season. Particularly indicated after matches, tournaments or intensive use periods, and as a complement to mechanical maintenance operations. Combine with Universal Resist before periods of climatic risk.

KEY BENEFITS

- 1:1 P:K ratio ideal for hardening and recovery
- Simultaneously strengthens roots (P) and cell walls (K)
- Essential in autumn for winter hardening of the turf
- Key complement in post-tournament and post-wear programmes

COMPOSITION

Phosphorus pentoxide (P ₂ O ₅)	20%
Potassium oxide (K ₂ O)	20%

APPLICATION

Mode	Foliar
Rate	2–4 kg/ha in 400–600 l water
Interval	Every 2–4 weeks according to load and phase
Note	Shake well before mixing

SPECIFICATIONS

Form	Liquid
Colour	Light brown
pH	6.10 ± 1.00
